THE DENOMINATOR PROBLEM

4 polished renders ≠ 4 publishable ads

A finished render can still fail review.

The cost changes when only one result ships.

ONE SIMPLE EXAMPLE

Four renders. One release.

REJECTED 01

wrong product detail ✕

REJECTED 02

claim could not be approved ✕

REJECTED 03

usage rights were unclear ✕

PUBLISHED 01

approved and released ✓

This is an example, not a market benchmark.

THE USEFUL NUMBER

Total workflow cost

ads actually published

Count the parts that disappear between render and release:

plan + extra credits + revisions + review time

COMPARE THE WORKFLOW

Render count is only the first number.

Creatify vs InVideo

workflow fit, credit math, review checks

What usually blocks the final publish on your team?
